Education

University of Waterloo

Bachelors of Computer Engineering, Co-op

Waterloo, ON

Graduation Date: 2026

Technical Skills

Frontend: React, Next.js, Tailwind CSS, JavaScript, TypeScript

Backend: C#, ASP.NET Core, .NET MVC, Flask, Python, Java, C++, SQL

Machine Learning: Pandas, Scikit-Learn, Matplotlib

Cloud/DevOps: Google Cloud Platform, AWS, PostgreSQL, MySQL, Postman, Git, Selenium

Experience

Software Developer

titanium.agency

Winter 2025

Waterloo, Canada

- Reduced page load times by **62%** through SQL query and stored procedure optimization, including targeted indexing, removal of redundant computations, and simplification of aggregations.
- Engineered a data archival workflow to transfer historical records from **MySQL** to partitioned **BigQuery** tables, reducing cloud costs by **30%** and improving query performance for transactional workloads.
- Developed real-time automation algorithms using **C#** and **Flask** to optimize budget adjustments and ad pausing through API integrations, leveraging **GCP BigQuery**, **Cloud SQL**, and **MySQL** for historical data analysis, enhancing data-driven decision-making.
- Designed and implemented an automated **ETL** pipeline using **C#** to ingest advertising performance data from third-party marketing APIs, perform data transformation and enrichment, and load structured results into **MySQL**, enabling real-time ad campaign analytics via integrated Tableau dashboards.

Undergraduate Research Assistant

University of Waterloo

Summer 2024

Waterloo, Canada

- Conducted research to optimize log analysis of large scale log data from various software systems by establishing a pipeline to generate ground truths for **template based log parsing**.
- Saved **10+ hours weekly** by developing **Python** scripts to analyze over **2 million** log entries and templates from **12** different software systems, streamlining data collection for the study.

Full Stack Developer

RIFO Holdings Group

Fall 2023

Toronto, Canada

- Enhanced realtor efficiency by collecting, processing and visualizing **real-time** housing market data from over **2.5 million** listings across diverse Canadian regions by leveraging **React**, **ASP.NET Core**, and a **MySQL** database.
- Facilitated seamless communication between front-end and back-end systems, enabling efficient data retrieval and enhancing user experience by designing and implementing **RESTful APIs**.
- Optimized data retrieval, manipulation, and analysis, resulting in a notable reduction in processing times by **95%** through utilizing parallel processing and asynchronous programming techniques within data processing APIs.

Projects

NBA Match Predictor - 🔄

Python, pandas, scikit-learn, matplotlib

- Trained and optimized a Random Forest classifier using **RandomizedSearchCV** and 5-fold cross-validation, achieving **66%** accuracy in predicting home team wins and identifying key predictive features via importance scores
- Built a full NBA game prediction pipeline in **Python**, by collecting and processing multiple seasons of team-level data using `nba_api` and **pandas**, enabling structured model training with over **20** statistical and engineered features per game

SlimPossible - 🔄

Next.js, ASP.NET Core, PostgreSQL, Tailwind CSS, Kinde Auth

- Engineered a full-stack web application empowering gym-goers to track their workouts and personal metrics, monitor progress, and create customized workout templates effortlessly.
- Implemented robust **RESTful APIs** with **ASP.NET Core** to efficiently handle workout data creation, retrieval, and history tracking within a **PostgreSQL** database.
- Created a responsive and intuitive user interface to optimize user experience with **Next.js** and **Tailwind CSS**.
