Education

University of Waterloo

Bachelors of Computer Engineering, Co-op

Waterloo, ON

Graduation Date: 2026

Technical Skills

Languages: Python, C#, Javascript, Typescript, C++, Java, SQL

Technologies/Frameworks: React, Next.js, Tailwind CSS, ASP.NET Core, .NET MVC, Flask

Developer Tools: PostgreSQL, MySQL, AWS, Google Cloud Platform (BigQuery, Cloud SQL, App Engine), Postman, Selenium, Pandas, Kinde Auth, Vercel, Jira, Confluence, Bitbucket, Git

Experience

Software Developer

Winter 2025

titanium.agency

Waterloo, Canada

- Developed real-time automation algorithms using **C#** and **Flask** to optimize budget adjustments and ad pausing through API integrations, leveraging **GCP BigQuery**, **Cloud SQL**, and **MySQL** for historical data analysis, enhancing data-driven decision-making.
- Automated data ingestion and synchronization from third-party APIs (**AWS**, Google Ads) into **MySQL** using **C#** and **ASP.NET**, reducing cloud costs while ensuring up-to-date data for ad performance tracking.
- Designed and implemented **GCP queues** for payload handling using **Python**, integrating Slack and email alerts for real-time failure notifications, with retry mechanisms and status-based error handling to enhance system reliability.
- Built ad creation tools using **ASP.NET MVC** to send payloads to automated apps, incorporating dynamic validation to ensure data consistency, leading to a **40% increase** in ad volume.

Undergraduate Research Assistant

Summer 2024

University of Waterloo

Waterloo, Canada

- Conducted research to optimize log analysis of large scale log data from various software systems by establishing a pipeline to generate ground truths for **template based log parsing**.
- Saved **10+ hours weekly** by developing **Python** scripts to analyze over **2 million** log entries and templates from **12** different software systems, streamlining data collection for the study.

Full Stack Developer

Fall 2023

RIFO Holdings Group

Toronto, Canada

- Enhanced realtor efficiency by collecting, processing and visualizing **real-time** housing market data from over **2.5 million** listings across diverse Canadian regions by leveraging **React**, **ASP.NET Core**, and a **MySQL** database.
- Facilitated seamless communication between front-end and back-end systems, enabling efficient data retrieval and enhancing user experience by designing and implementing **RESTful APIs**.
- Optimized data retrieval, manipulation, and analysis, resulting in a notable reduction in processing times by **95%** through utilizing parallel processing and asynchronous programming techniques within data processing APIs.

Projects

McCheatDay - 🐙

React, Flask, PostgreSQL, Tailwind CSS, Selenium

- Developed an end-to-end web platform enabling users to search McDonald's menu items based on nutritional criteria by integrating a **React & Tailwind CSS** frontend with a **Flask** backend and **PostgreSQL** database.
- Built a **Selenium-based** web scraper in **Python** to extract real-time nutritional data from the McDonald's website, automating data collection and storing structured information in a **PostgreSQL** database.
- Designed and optimized **Flask** API endpoints to enable efficient querying of menu items based on nutritional criteria, improving data accessibility and user experience.

SlimPossible - 🐙

Next.js, ASP.NET Core, PostgreSQL, Tailwind CSS, Kinde Auth

- Engineered a full-stack web application empowering gym-goers to track their workouts and personal metrics, monitor progress, and create customized workout templates effortlessly.
- Implemented robust **RESTful APIs** with **ASP.NET Core** to efficiently handle workout data creation, retrieval, and history tracking within a **PostgreSQL** database.
- Created a responsive and intuitive user interface to optimize user experience with **Next.js** and **Tailwind CSS**.
- Integrated secure user registration, login, and profile management using **Kinde's** authentication features.
